SUMMARY

I am a Back-end Software Engineer with 5 years of experience, including 3 years dedicated to building microservices systems from the ground up. With a strong foundation in back-end development, I specialize in creating robust, scalable distributed systems while monitoring and optimizing their performance. In addition, I am passionate about learning new technologies and researching technical topics. As a team player, I enjoy helping others and excel in collaborative environments, often taking on mentoring tasks and conducting code reviews for my peers.

TECHNICAL SKILLS

- **Programming Languages:**

- C#, Java

- **Frameworks/Platforms:**

- C#: ASP.NET Core

- Java: Spring Boot, Bitzero (in-house)

- **Database Management Systems:**

- DynamoDB, MariaDB

- Redis, Memcached

- **Version Control:**

- Git, SVN

- **Soft Skills:**

- Time management

- Teamwork

- **Others:**

- Good understanding of OOP methodologies, SOLID principles, and design patterns.

- Experience with Agile and Scrum development process.

- Having knowledge about the cloud computing platform (AWS).

EDUCATION

Hanoi University of Science and Technology

09/2016 – 09/2021

- Studied the ICT program – Information Communication and Technology.

- Degree grade: Distinction – GPA 3.43/4.

PROFESSIONAL EXPERIENCE

Atherlabs – Backend Software Engineer

08/2022 – Now

Project: Sipher Odyssey Server

- Description: A web service system that manages data logic for an online video game application in a Rogue-like genre, incorporating NFT elements for in-game item trading.

- Team Size: 5
- Technology:
 - Architecture: Microservices
 - Database: DynamoDB, PostgreSQL, Redis.
 - Web Service: ASP.NET Core.
 - Matchmaking: OpenMatch.
 - Communication: gRPC, REST API, SignalR, Kafka.
 - Metrics and monitoring: OpenTelemetry, NewRelic.
- Responsibilities:
 - Developed the codebase for services within the microservices architecture.
 - In charge of handling matchmaking feature using OpenMatch, an open-source matchmaking framework by Google.
 - Implemented key features related to battles and in-game items, achieving over 80% unit test coverage and comprehensive documentation.
 - Collaborated with the DevOps team to deploy the system using a Canary strategy, ensuring minimal downtime.
 - Monitored, load-tested, and improved system performance to handle up to 5000 requests per second.
 - Reviewed the solution and code of other team members.

Zingplay Game Studio – Game Server Engineer

06/2020 – 08/2022

Project: Lucky 9 Server (Philippines)

- Description: A system that serves data and gameplay logic for a card game where the objective is to reach a count of nine.
- Team Size: 2
- Technology:
 - Game server: Java Core, Bitzero, WebSocket.
 - AdminTool: PHP, HTML, CSS.
 - Metric system: PHP, HTML, CSS, Python, Spark, Hadoop.
- Responsibilities:
 - Developed game events capable of supporting 1000 concurrent users.
 - Created an admin tool with live operation and cheat functionality.
 - Collected and processed game logs, reaching up to 5GB per day, and visualized metrics to assist the Business Department and Game Designers in decision making.

Project: Zingplay game portal event (Philippines and Vietnam)

- Description: A major annual event on the Zingplay game portal, featuring multiple minigames in which players can earn rewards.
- Team Size: 2
- Technology: Java Spring Boot, MySQL

- Responsibilities:
 - Implemented the logic for minigames and reward distribution.
 - Optimized the service to accommodate approximately 10,000 concurrent users.
 - Developed cheat functionality to facilitate the work of front-end engineers and quality control.

Topica Education – Back-end Software Engineer

08/2019 – 06/2020

Project: Topica VCRX

- Description: A Jitsi Meet-based video conferencing application for online classes.
- Team Size: 3
- Technology:
 - Back-end: Java Spring Boot, MongoDB.
 - Front-end: React, React Native, Jitsi Meet.
- Responsibilities:
 - Collaborated with the team leader to migrate the source code to a new version with updated organizational rules and coding standards.
 - Investigated and implemented unit testing for client code using the Jest framework.
 - Developed SSO login functionality to streamline user access across web and mobile applications.
